

Mohammed Jaseel K

Full Stack Developer

Location: Valanchery, Kerala | Phone: +91 9846644092 | Email: mohammejaseel90@gmail.com
GitHub: github.com/mhd-jaseel | LinkedIn: linkedin.com/in/mohammed-jaseel90 | Portfolio: jaseel-dev.vercel.app

PROFESSIONAL SUMMARY

Full Stack Developer specializing in the MERN stack and TypeScript, building scalable and secure web applications and e-commerce systems. Developed 25+ RESTful APIs, implemented secure authentication workflows across 30+ protected routes, and integrated payment gateway architectures with webhook processing. Experienced in AWS EC2 deployment, MongoDB aggregation pipelines, database optimization, and real-time communication systems.

Core Competencies: Full Stack Development, RESTful APIs, Payment Gateway Integration, Authentication & Security, Database Optimization, Real-Time Applications, Cloud Deployment

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React, Vite, React Router, Tailwind CSS, Bootstrap, React Hook Form, Framer Motion, Context API, Socket.io-client, Responsive Design

Backend: Node.js, Express.js, REST API Development, MVC Architecture, Webhook Processing, Middleware, Protected Routes, API Integration, Multer, Sharp

Authentication & Security: JWT, HTTP-Only Cookies, OAuth 2.0, RBAC, HMAC-SHA256, bcryptjs, Helmet, Rate Limiting

Database: MongoDB, Mongoose, Aggregation Pipelines, Query Optimization

Payments: Razorpay Payment Gateway, Payment Verification, Webhooks, Digital Wallet, Refund Management

Cloud & DevOps: AWS EC2, Nginx, SSL (Certbot), Docker Basics, CI/CD, Render, Vercel

Tools: Git/GitHub, Postman, VS Code, Firebase, Cloudinary

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern (MERN) — Future By Catalyst

Aug 2025 – Present

- Developed and deployed 3 full-stack applications, including two e-commerce platforms and a real-time portfolio and booking platform, using MERN technologies and cloud deployment platforms.
- Developed 25+ RESTful APIs with authentication, input validation, and centralized error handling, documented using Postman collections.
- Implemented JWT-based authentication and role-based access control across 30+ protected routes to secure role-specific API access.
- Optimized MongoDB queries and aggregation pipelines to improve API response performance and database read efficiency.
- Structured backend applications using MVC patterns and reusable middleware components to maintain consistent API and business logic across projects.

PROJECTS

DynaVue — Full Stack Portfolio Platform

Stack: React, Vite, Node.js, Express.js, MongoDB, Socket.io, Firebase, Cloudinary, Tailwind CSS, Render, Vercel

Live: [dynavue.in](#)

- Built a full-stack MERN portfolio and booking platform featuring dynamic content management, service scheduling, and role-based access control.
- Integrated Socket.io for real-time bidirectional client-admin messaging with user-specific rooms, alongside Firebase Admin for push notifications and in-app alerts.
- Implemented dual authentication using Google OAuth 2.0 and JWT with role-based middleware protecting client and administrator endpoints.
- Engineered media upload workflows using Multer in-memory storage and Cloudinary API for image galleries, video showcases, and client assets.
- Optimized frontend performance using React route-based code splitting with React.lazy, Vite bundling, and Framer Motion page transitions.

VAULT.CO — Production E-Commerce Platform

Stack: React, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Razorpay, Sharp, Cloudinary, Vercel, Render

Live: vaultco.online

- Engineered a full-stack e-commerce platform using React, Node.js, and MongoDB with a modular architecture and 21 Mongoose data models managing catalog, order, payment, and promotion workflows.
- Integrated Razorpay Payment Gateway with HMAC-SHA256 signature verification, server-side payment validation, and raw-body webhook handling for asynchronous payment updates.
- Implemented end-to-end returns and replacement workflows with admin inspection controls and automated refunds credited to user digital wallets with transaction tracking.
- Built coupon and discount business logic with minimum purchase requirements, per-user redemption limits, product/category promotions, and atomic inventory deduction and rollback mechanisms.
- Implemented backend image processing using Multer and Sharp for WebP optimization before Cloudinary storage.

KM Store — Full Stack E-Commerce Platform

Stack: HTML5, CSS3, JavaScript, Node.js, Express.js, MongoDB, AWS EC2, Nginx

Live: kmsupermarket.online

- Developed and deployed a full-stack e-commerce platform with product catalog management, dynamic search and filters, cart, and multi-step order checkout.
- Structured the backend using MVC architecture and built 25+ RESTful API endpoints across 15 distinct functional modules.
- Implemented unit-based inventory validation with automatic stock deduction and replenishment across order placements, cancellations, and returns.
- Secured user and admin workflows using JWT authentication, role-based access control (RBAC), bcrypt password hashing, and Google OAuth 2.0.
- Configured AWS EC2 deployment with Nginx reverse proxy and SSL certification for live production hosting.

EDUCATION

B.Com Finance	2022 – 2025
University of Calicut	

CERTIFICATIONS & TRAINING

MERN Stack Development – Catalyst Tech Hub	2025 – 2026
Full Stack Web Development Internship – Future By Catalyst	2025 – 2026
